A Rated Dishwashers

Appliance Information

Dishwashers impact the environment through the consumption of both power and water. Energy efficient dishwashers can use up to 40% less power and cut water usage by up to 25%.

Dishwashers are required by EU law to display an energy efficiency label to provide consumers with a simple efficiency comparison between products. The comparison is based on a grading system with the most efficient appliances receiving a A while the least efficient receive a G. Energy consumption is measured in kilowatt hours per cycle for one test cycle, usually the economy or eco cycle.

The current EU energy labelling system is due to be upgraded in late 2011 or early 2012 and will put in place an A+, A++ and A+++ rating for dishwashers, this is to allow consumers to easily identify the most efficient models.

All of our dishwashers are rated A or above.

Available Brands

We only display a small selection of appliances on our website, please contact us for details regarding our full range.

- AEG
- Bosch
- Candy
- Hoover
- Hotpoint
- Indesit
- Whirlpool
- Zanussi
